BURGER CONSULTING GROUP INC.
Information Systems Consulting for the Construction Industry

Directory of
New Services

From inception in 1997, **Burger Consulting** has been regarded as the firm to come to for objective and independent counsel on technology and best practices in construction. Our early days were focused on ERP and other business systems.

Expanded Service Offering

While that remains a core focus, we have expanded our service offerings in response to market trends and client needs.

01 Human Resources Information System

Timeframe: 2 to 3 months

Many contractors are implementing full-scale HRIS solutions to meet the needs of their employees and human resource departments. These solutions often include time-keeping, payroll processing, training and learning management systems. We help them develop strategies and select the right solutions.

02 Procure-to-Pay

Timeframe: 2 to 3 months

In the last two years, Burger Consulting has conducted a number Procure–to–Pay assessments for large scale specialty contractors who want to optimize their supply chain process. This involves streamlining requisition, purchase order receiving, and invoice processing.

03 Integration Management

Timeframe: 2 to 3 months

Contractors often struggle with disconnected systems, including a mixture of on-premises, hosted, and cloud solutions. The tools are available to handle these integrations. Burger Consulting has helped many companies develop all forms of integrations strategy, all appropriate for size and sophistication of the organization.

04 Data and Analytics

Timeframe: 3+ months

Data and Analytics tools are abundant now. However, the hard work involved in developing a data strategy often happens behind the scenes, focusing on building a strong foundation and improving the quality of existing data. Once this groundwork is complete, the fun part begins - connecting dashboards and presenting valuable data to both office and field personnel.

05 IT Strategy

Timeframe: 3 to 4 months

Many of Burger Consulting Group's clients have reached a point where they can no longer prioritize IT based on the loudest voice or by following shadow IT. Contractors now seek a more disciplined and efficient approach to IT planning and execution. Burger Consulting addresses this need through its strategic planning process, which involves developing a detailed and client-centered IT roadmap that typically spans the next two to three years.

06 Project Management

Timeframe: 3+ months

General contractors have clearly embraced Procore, although their approaches may vary. However, the situation is less clear for specialty contractors, owners, and industrial contractors. Burger Consulting is actively assisting large industrial and specialty contractors in developing their project management strategy, considering the rush of general contractors and owners towards Procore and other owner-centric solutions.

07 Process Assessment

Timeframe: 3 to 4 months

Some organizations prioritize conducting a comprehensive process assessment before they begin evaluating and selecting new technology. Their aim is to ensure that their business processes align with industry best practices or at least contracting standards. This project culminates in a roadmap for enhancing key processes within the organization, reducing risk and improving overall efficiency.

08 IT Staffing

Timeframe: 3+ months

Contractors have had to shift the focus of their IT departments from infrastructure and gear to applications and user-centric solutions. While some contractors have successfully made this transition, others face challenges. Burger Consulting conducts IT assessments to assist management in evaluating the strengths of their IT resources and identifying areas for development to meet the growing demand.

09 Project Management Office

Timeframe: Variable

Our Project Management Office is often tasked with overseeing large-scale system implementations and deployments. Equipped with experienced senior project managers and project coordinators, they are well-versed in collaborating with client teams, vendor consultants, and technical resources. Their expertise ensures the successful completion of high-stakes projects within the designated timeframe and budget.

The firm's dedication to Construction over the last 25 years means our clients receive knowledgeable and professional assistance regardless of the scope of the IT engagement. For more information about these newer services, please visit our website (www.burgerconsulting.com) or give us a call at 312.651.4150.
